

Coffeemaker introduces oneself

- Upper container with built-in hollow column for pouring of coffee
- Upper filter
- Rubber gasket
- Funnel shaped filter
- Boiler with safety valve

Spare parts if you wish to receive spare parts, always specify the model and its capacity.

real Italian coffee with

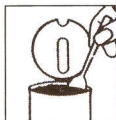

As soon as you take home your newly purchased VEV Coffeemaker wash it thoroughly with soda and bicarbonate (do not use scented or abrasive detergents). It is advisable to dispose of the first few coffees you make so that the coffee aroma may soak into the various components of the coffeemaker.

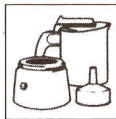

Fill boiler with water up to, not above, safety valve. Spread out coffee into funnel, shaped filter and press down lightly.

Keep flame low in order not to overheat the coffee and to preserve the rubber gasket. When the upper container is almost completely filled with coffee (coffee pours from built-in hollow column) remove your Miss VEV Coffeemaker from the flame.

Now mix with a teaspoon to blend thicker first-sprouted coffee with lighter coffee sprouted afterwards.

After use disassemble your Miss VEV Coffeemaker then wash it and rinse it thoroughly. To avoid odors leave coffeemaker disassembled when you are not using it.
